

CLAIMS

1. A foldable pushchair for babies comprising two back wheels and a central front wheel being a castoring wheel, characterized in that a footrest is linked in a pin-jointed connection to the lower portion of the converging front legs, the castoring wheel being fitted to the front end of said footrest, this latter being provided with means being apt to lock it in its position when in use and allowing to fold it.
2. A foldable pushchair for babies as per claim 1, characterized in that the footrest comprises means allowing to lock and unlock the castoring support supporting the castoring wheel, this latter being provided with braking means.
3. A foldable pushchair for babies as per claim 1, characterized in that a plate is fixed to the lower portion of the front legs, said plate being gripped by the footrest locking means.
